PROFESSIONAL SUMMARY

Agentic AI Developer with hands-on experience building autonomous AI systems, LLM-powered workflows, and intelligent automation pipelines using n8n, Make, and Zapier. Proficient in Python, API integration, and prompt engineering for real-world AI agent deployments. Designed and deployed a real-time AI threat-detection agent (OceanShield AI) using anomaly detection on live data streams, presented at a national AI/ML hackathon. Strong foundation in AI/ML fundamentals, cloud AI services, and cross-functional product delivery — ready to build, orchestrate, and ship intelligent agentic solutions.

AI AGENT PROJECTS

Resume Analyzer AI — ATS Optimizer Agent · n8n · OpenAI API · Webhook · PDF Extraction

- Built a fully autonomous AI agent pipeline in n8n triggered via webhook — accepts resume PDF uploads and job descriptions, extracts text, invokes OpenAI GPT for ATS scoring and keyword gap analysis, and returns structured JSON feedback automatically.
- Designed multi-node orchestration: Webhook → PDF Extract → Input Validation → LLM Prompt Engineering → Structured Response — end-to-end with zero manual intervention.
- Implemented conditional branching and error-handling nodes ensuring robust pipeline execution across edge cases (missing files, invalid inputs).

Social Media AI Content Generator Agent · n8n · OpenAI API · Instagram Graph API · Webhook

- Developed an agentic content automation workflow in n8n that receives brand inputs via webhook, generates AI-written social media posts using OpenAI, and autonomously publishes to Instagram via Graph API — full end-to-end without human touchpoints.
- Integrated multi-step tool use: content generation → image URL detection → media container creation → post publishing → verification loop, demonstrating advanced AI orchestration.
- Built dynamic response paths (post published vs. content-only) ensuring graceful handling of all workflow branches.

OceanShield AI — Real-Time Maritime Threat Detection Agent · Python · Scikit-learn · Isolation Forest · Folium · National AI/ML Hackathon 2026

- Built an autonomous AI surveillance agent detecting illegal vessel activity (dark ships, loitering, AIS gaps) using Isolation Forest anomaly detection on live AIS data streams — achieving <5% false-positive rate.
- Designed a weighted risk-scoring engine (Low / Medium / High) surfaced on a live Folium map; presented system architecture to 8 judges at a national AI/ML hackathon.
- Integrated simulated SAR satellite cross-referencing with AIS signal data; optimised high-throughput batch processing via vectorised Pandas.

Customer Churn Prediction & Retention AI · Python · Random Forest · SQL · Power BI · Scikit-learn

- Built an AI-driven churn prediction system (87% accuracy vs 73% baseline) that autonomously flags ~15% high-risk customers into plain-language risk tiers (Low / Medium / High) for direct marketing action.
- Delivered end-to-end Power BI retention dashboard with risk-tier segmentation and drill-through filters.

EXPERIENCE

Data Analytics & ML Intern · YBI Foundation

Jul – Dec 2024 · Remote

- Built automated Python ETL pipelines reducing null values and duplicate records by ~20% across 3 source files; documented pipeline logic for team handoff.
- Wrote 15+ SQL queries (CTEs, window functions) on 50K+ records to surface KPI trends; built Power BI dashboards eliminating recurring manual Excel reporting.
- Achieved 92% classification accuracy (vs 76% baseline) on ML-based healthcare disease prediction — validated via 5-fold cross-validation.

Data Science Intern · [Teachnook](#)

Jul – Aug 2024 · Remote

- Performed EDA on retail dataset — identified demand patterns and seasonality trends; structured findings into 3 actionable inventory recommendations.
- Built regression forecasting models achieving 85% accuracy (vs 71% baseline) on short-term sales prediction.

TECHNICAL SKILLS

AI Agents & Automation	n8n · Make (Integromat) · Zapier · Webhook Workflows · AI Orchestration
LLMs & AI	OpenAI GPT API · Prompt Engineering · LLM Tool Use · Agentic Pipelines · AI/ML Fundamentals
Languages	Python (Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn) · JavaScript (basic) · SQL
APIs & Integration	REST APIs · Instagram Graph API · Webhook Design · JSON Parsing · API Authentication
ML & Modelling	Classification · Regression · Anomaly Detection · Isolation Forest · Ensemble Methods · Feature Engineering
BI & Viz	Power BI (DAX, Star Schema) · Tableau · Matplotlib · Seaborn
Cloud & Tools	Microsoft Azure (AI Fundamentals) · Oracle Cloud Infrastructure (GenAI) · Git / GitHub · Streamlit · Jupyter · VS Code

CERTIFICATIONS

- Oracle Cloud Infrastructure — Generative AI Professional · Oracle (2025)
- Google Analytics Certification · Google (2026) · Valid through 2028
- Azure AI Fundamentals · Microsoft (2025)
- AI Fundamentals: Foundations for Understanding AI · IBM SkillsBuild (2026)

EDUCATION

B.E. — Mechanical Engineering · [SNS College of Engineering, Coimbatore](#) 2023 – 2027 · CGPA: 8.45 / 10.0
Independent study: Statistics for Data Science · Probability · Linear Algebra · ML Fundamentals · AI Agent Development

RESEARCH & ACHIEVEMENTS

- "An Intelligent System for Real-Time Thief Detection and Motion Monitoring" — Submitted to IEEE Xplore, Nov 2024.
- Presenter — OceanShield AI architecture and anomaly detection findings to panel of 8 judges at national AI/ML Hackathon 2026.
- Participant — Smart India Hackathon 2024 · L&T Techgium Hackathon (9th Edition) · Smart Campus Hackathon (South Asian University).
