

HARSHAN RASU

Full Stack Developer | Front-End Engineer | AI Automation Specialist

Coimbatore, Tamil Nadu, India | +91 6381534316 | harshan0077888@gmail.com | harshan26.in | linkedin.com/in/harshan-rasu | github.com/Harshan26

PROFESSIONAL SUMMARY

Full Stack Developer with 2+ years of hands-on experience delivering production websites and web applications across the complete SDLC — requirements, database design, REST API integration, responsive front-end engineering, deployment, and post-launch support. Skilled in HTML5, CSS3, modern JavaScript (ES6+), MySQL, and animation-driven UI development using GSAP, ScrollTrigger, Three.js, and Lenis. Founder of Phanix Tech, a freelance agency that has shipped 8+ client and personal projects spanning food ordering, hospitality, fitness, education, and interactive media. Differentiated by applied AI automation and prompt engineering experience (OpenAI API, n8n, Zapier, Make), combining software engineering fundamentals with intelligent workflow design to build fast, scalable, SEO-friendly, and highly interactive digital products.

CORE TECHNICAL SKILLS

Programming Languages: JavaScript (ES6+), Python, HTML5, CSS3, SQL

Front-End Development: Responsive/Mobile-First Design, DOM Manipulation, Component-Based CSS Architecture, Cross-Browser Compatibility, Accessibility (WCAG basics)

Animation & Interactive Web: GSAP, ScrollTrigger, Lenis Smooth Scroll, Three.js, Canvas API, CSS Animations, Parallax & Scroll-Driven Storytelling

Back-End & Databases: MySQL, RESTful API Design & Integration, JSON, API Authentication, LocalStorage, Node.js (working knowledge)

AI & Automation: OpenAI GPT API, Prompt Engineering, n8n, Zapier, Make, AI-Driven Workflow Automation, AI Agent Development

Data & Analytics: Python (Pandas, ETL), Power BI, Tableau, Streamlit, Jupyter, Exploratory Data Analysis, Regression Modeling

Design & Prototyping: Figma, FlutterFlow, UI/UX Fundamentals, Design Systems (typography, color tokens, spacing scales)

Tools & Platforms: Git, GitHub, VS Code, Vercel, Technical SEO, i18n/Localization, WhatsApp Business API

EXPERIENCE

Founder & Full Stack Developer — Phanix Tech (Freelance Agency) · Remote 2026 – Present

- Founded and operate a full-stack web development, AI automation, and design agency serving small-business clients end to end, from discovery call to post-launch support.
- Independently designed, built, and deployed 8+ production websites and web apps — including cinematic/interactive platforms, food-ordering systems, gym, café, bakery, and institutional websites — covering database design, backend logic, REST API integration, and responsive front-end development.
- Own the full client lifecycle: requirements gathering, UI/UX design in Figma, sprint-based development, QA, deployment, and ongoing maintenance, consistently delivering on scope and timeline.
- Applied AI automation (n8n, OpenAI API) to streamline client onboarding and content workflows, reducing manual turnaround time for repetitive tasks.

Data Analytics & ML Intern — YBI Foundation · Remote Jul – Dec 2024

- Built automated Python ETL pipelines that reduced null values and duplicate records by ~20% across 3 source data files, improving downstream data quality and reporting accuracy.
- Authored 15+ advanced SQL queries (CTEs, window functions) against 50K+ records to surface key business KPI trends for stakeholder reporting.
- Designed Power BI dashboards that eliminated recurring manual Excel reporting, saving the team hours of weekly effort.

Data Science Intern — Teachnook · Remote Jul – Aug 2024

- Collaborated with a research mentor from IIT Roorkee on model design and validation approach for a retail demand-forecasting use case.
- Conducted exploratory data analysis (EDA) on a retail dataset, identifying demand and seasonality patterns and translating findings into 3 actionable inventory recommendations.
- Built and validated regression forecasting models achieving 85% prediction accuracy versus a 71% baseline for short-term sales forecasting.

FEATURED PROJECTS

MCU Multiverse Hub — Cinematic Interactive Superhero & Movie Platform

Tech: HTML5, CSS3, JavaScript (ES6+), Canvas API, JSON

- Engineered a single-page interactive hub spanning 14 superhero franchises with a custom canvas-based particle engine, crossfading video stage, and live search/filter movie catalog.
- Architected a JSON-driven data layer that decoupled content from UI logic, cutting the effort to add a new franchise or film from a code change to a simple data entry.
- Built a reusable global trailer modal and animated hero-overlay stat cards, standardizing the UI pattern across all 14 character profiles and reducing code duplication.

THALAPATHY — Cinematic Tribute Experience

Tech: HTML5, CSS3, JavaScript, GSAP, ScrollTrigger, Lenis, Three.js

- Built a fullscreen, scroll-driven cinematic web experience combining Three.js 3D visuals with GSAP/ScrollTrigger-linked animation sequences for a motion-picture-grade feel.
- Integrated Lenis smooth-scrolling to synchronize scroll velocity with animation timing, eliminating jank across scroll-triggered scene transitions.
- Designed a custom dark-luxury design system — color tokens, type scale, and easing curves — reused across every section for consistent, production-quality visual polish.

SNS College of Technology — Institutional Website Redesign

Tech: HTML5, CSS3, JavaScript, GSAP, ScrollTrigger, Lenis, Three.js, Technical SEO

- Redesigned the flagship public website for an autonomous, NAAC A++ accredited engineering college, modernizing the institution's digital presence with Three.js 3D elements and GSAP scroll animation.
- Implemented SEO-optimized metadata, keyword-rich content structure, and semantic HTML to strengthen organic search visibility for admissions and program discovery.
- Delivered a fully responsive rebuild across desktop, tablet, and mobile, ensuring consistent performance and accessibility for a high-traffic institutional audience.

TFC - Chicken Alrabea — Full-Stack Food Ordering & Delivery Platform

Tech: HTML, CSS, JavaScript, JSON, LocalStorage, i18n

- Built an end-to-end ordering platform with a dynamic cart, live totals, and multi-step checkout validation, plus an admin panel and real-time order-status tracking backed by a JSON-driven menu/offers data layer.
- Added multi-language support (i18n) and delivery-zone logic with persistent cart/order storage via LocalStorage, enabling a seamless customer ordering journey without a dedicated backend.
- Structured the admin panel so non-technical staff could update menu items, prices, and offers directly, removing developer dependency for routine content changes.

Seb's Pastry — Live Bakery Business Website

Tech: HTML, CSS, JavaScript, WhatsApp Business API

- Delivered a live production website for a Chennai-based bakery, currently used in daily business operations to generate customer orders.
- Integrated one-click WhatsApp ordering via deep links, eliminating the need for a separate ordering backend or third-party ordering platform.
- Built a quick order builder that auto-generates a formatted WhatsApp order message from customer item selections, reducing order errors and back-and-forth messaging.

EDUCATION

B.E. — Mechanical Engineering, SNS College of Engineering, Coimbatore

2023 - 2027

CGPA: 8.77 / 10.0

Relevant self-directed coursework (outside core curriculum, pursued to pivot into software/AI):

- Web Development: HTML5, CSS3, JavaScript (ES6+), responsive design, animation libraries (GSAP, Three.js) — self-taught through project-based learning
- Data Science & Statistics: Statistics for Data Science, Probability, Linear Algebra, Machine Learning Fundamentals
- Artificial Intelligence: AI Agent Development, Prompt Engineering, Generative AI application design
- Applied all self-study directly to production work — every technical skill above was validated by shipping a live client or personal project

CERTIFICATIONS

- Oracle Cloud Infrastructure — Generative AI Professional, Oracle (2025)
- Google Analytics Certification, Google (2026) — Valid through 2028
- Azure AI Fundamentals, Microsoft (2025)
- AI Fundamentals: Foundations for Understanding AI, IBM SkillsBuild (2026)

RESEARCH & ACHIEVEMENTS

- "An Intelligent System for Real-Time Thief Detection and Motion Monitoring" — Submitted to IEEE Xplore, Nov 2024.
- Presenter — OceanShield AI architecture and anomaly detection findings to a panel of 8 judges at National AI/ML Hackathon 2026.
- Participant — Smart India Hackathon 2024, L&T Techgrium Hackathon (9th Edition), Smart Campus Hackathon (South Asian University).
